BUILDICY
BUILD THE FUTURE

PROCESS

How We Work

A practical client guide to the Buildicy delivery approach, from discovery through launch and improvement.

AI • AUTOMATION • SOFTWARE • DIGITAL PRODUCTS

Prepared for prospective Buildicy clients.

How Buildicy turns an idea into a system

Different products require different technical choices, but the delivery mindset stays consistent: understand the problem, design the system, build carefully and make it usable.

> **“Clients do not need to arrive with a perfect technical specification. A clear problem and desired outcome are enough to start the conversation.”**

The delivery journey

Map → Design → Build → Integrate → Test → Launch

01 — Discover

Understand the users, business context, workflow, constraints and intended outcome. Identify what the system actually needs to solve.

02 — Map the system

Translate the use case into journeys, data flows, roles, integrations, states and the capabilities required by the product.

03 — Design

Shape the user experience, information architecture and system structure before implementation.

04 — Build

Develop the application, automation, APIs, dashboards, mobile flows or smart-contract components appropriate to the product.

05 — Integrate & test

Connect required services and verify the key workflows, data handling and user journeys before release.

06 — Launch & improve

Release the product and use feedback, operational needs and verified performance information to guide future improvements.

What this looks like across the portfolio

AI products Markeee • BizBrain • GrowZO	**Financial infrastructure** GlobalPay Hub
Mobile workflow ShieldHire	**Web3 systems** DeID • NFT E-Voting • Land Vault
Tracking & safety PackSure • RoadGuard	**Data operations** Data Automation

Innovation platforms Hack Beyond The Limits	

Client collaboration

✓ Share business context, users and the desired outcome.

✓ Provide approved brand/content assets where needed.

✓ Provide access to required third-party platforms for integrations.

✓ Review milestones and provide timely feedback.

✓ Identify a clear project decision-maker.
